#### **Executive Summary**

Transcript analysis of approximately 400 students who entered Simon Fraser University during 1998 revealed that they successfully transferred 85.2% of the credits they earned at college. The reasons why the remaining earned credit did not transfer were examined. The primary reason for loss of credit on transfer was that the course does not appear to be a university level course or its content is clearly technical or vocational in nature. Other reasons were that the student had already transferred the maximum allowable credit, so some credits were superfluous. Some SFU courses were weighted with fewer credits than the equivalent college course, some courses were unarticulated for reasons that are unclear and some courses do not receive transfer credit if taken on their own, but must be taken in combination with other courses to receive transfer credit.

The results appeared to show that, for those students who took care in planning their programs and courses, the college transfer route to the University was effective and efficient.

The data compare closely with those of an earlier study of students who transferred to the University of British Columbia.

#### **Purpose**

This report shows how Simon Fraser University evaluated transfer credit for those students who transferred from colleges or university colleges in British Columbia in 1998.

This study has been sponsored by the British Columbia Council on Admissions and Transfer (BCCAT). The Council has long been interested in collecting and analyzing data on transfer outcomes, with a view to improving and enhancing access to post-secondary education. In 1998, the BCCAT published a discussion paper titled "Transfer: What's the Problem?" which gives an overview of a debate on the performance of British Columbia's well-established transfer system. Some educators comment that the current system is complex and relatively inefficient. A large number of autonomous institutions set their own curricula and cooperate with varying degrees of success to articulate their courses with others, to enable students to transfer without loss of time or credit. As there is no common curriculum at the provincial universities, colleges are sometimes under pressure to offer transferable academic courses to suit various learning objectives. Recent studies, cited in the bibliography and mentioned in BCCAT's "Transfer: What's the Problem?" paper show two different aspects of this transfer process: anecdotal evidence is offered of students who take excessive years of study to complete bachelors' degrees, losing credit as they transfer and feeling ill-informed about the process. On the other hand, a survey of college and university staff showed that they believed that the current transfer system works relatively well. A transcript analysis study at UBC showed that their transfer students brought 85% of their college credit with them and gave substantial reasons why the remaining 15% of credit did not transfer. This report provides further evidence to contribute to this debate.

#### Methods

During 1998, there were three intakes of new students; to the Spring semester (January), Summer semester (May or July), and Fall semester (September). The total intake of new undergraduate students for that year was 4970. Of these, 1444 (almost 30%) were classified as British Columbia college transfer students. These students had at least a year of post-secondary academic credit and the majority of that credit was from a BC college or university college, referred to henceforth simply as colleges. There were also other new students who entered SFU after taking college courses, but they were not classified as transfer students because the majority of their credits was from other institutions (e.g. universities) or they had completed less than an academic year (30 credits) of post-secondary credit.

From the total transfer population of 1444, a sample of 400 was selected randomly by computer. This number was chosen to give adequate statistical validity. Three of these students were subsequently dropped from the study due to insufficient data about their college courses, leaving a sample size of 397.

The colleges which are represented in this study are as follows.

Camosun College Capilano College University College of the Cariboo College of New Caledonia Columbia College Coquitlam College Douglas College University College of the Fraser Valley Kwantlen University College Langara College Malaspina University-College North Island College Northern Lights College Northwest Community College Okanagan University College Selkirk College

In the sample, the following institutions were not represented.

College of the Rockies
Institute of Indigenous Government
Nicola Valley Institute of Technology

These institutions were unrepresented, only for the reason that the sample included none of their transfer students. The College of the Rockies is relatively small and the other two institutions have only recently established articulation agreements with Simon Fraser University.

For the purpose of this study, the B.C. Open University (Open Learning Agency), the B.C. Institute of Technology, the Justice Institute of B.C., Emily Carr Institute of Art and Design and the B.C. provincial universities are excluded.

At the time of entry, each new student is assigned to a faculty at SFU. These faculties are:

Applied Sciences

Arts

**Business Administration** 

Education

Science

During 1998, the process for assigning each incoming student to a faculty changed. For Spring and Summer semesters, the faculty shown is the student's choice. Starting Fall semester 1998, SFU admitted new students to a faculty only if there was space in that faculty and the student could be assured of graduation from the faculty, subject only to maintaining the minimum academic performance required for continuance in that faculty. The effect of this was to offer admission into an alternate faculty, usually Arts or Science, to many students whose first choice was a limited enrollment faculty, such as Business Administration, Applied Sciences or Education. Comparisons between admissions to the faculties are therefore unreliable for 1998. However, all faculties at SFU share common transfer credit rules and procedures, so this change in process does not affect the validity of this study.

The college record, as entered on the SFU student database, and related SFU transfer credit records were compared and examined for each student in the sample. This information was entered onto a spreadsheet, which was used to perform calculations to give the:

- 1) number of credits attempted at college;
- 2) number of credits earned at college; and
- 3) number and type of transfer credits granted by SFU.

If there was a discrepancy between the number of credits earned at college and the number of transfer credits granted by SFU, any course that did not transfer was identified and reasons were explored to explain why that course did not transfer. If there were multiple reasons why a course did not transfer, or why students lost credit, the reason that described why most of the credits did not transfer was used. If the student attended more than one college, the college at which most credits were taken was used as the representative college. If a student withdrew from a course, that course was not considered in the number of credits attempted or in the number of credits earned. Data were aggregated into tables to allow easy comparison between the number of credits that students took at college and the number of credits that they were granted when they transferred to SFU, according to the faculty they entered at SFU and the college from which they transferred.

Some colleges, notably the private colleges, Columbia and Coquitlam Colleges, offer both secondary school and post-secondary programs and both are recorded on the same transcript. Universities do not generally grant transfer credit for secondary school work, so there is a case to be made for exclusion of this secondary school credit from the study. However, virtually all of the colleges in the study offer Adult Basic Education (ABE) programs, which are secondary school equivalent programs for adults. Oddly, some college ABE courses receive transfer credit at SFU. It could be argued that all secondary school and ABE courses should be ignored in this study, but there are several other types of courses that also might be best excluded, such as trades courses such as Auto Body Repair. Lacking any clear definition of what are legitimate post-secondary courses, all ABE and secondary school credits attempted and earned have been retained in this study, if they appear on the transcript of a college.

#### Results

The results of this report are summarized in eight tables and one figure. A list of courses that did not transfer is included in an appendix. Overall, approximately 3,300 credits earned by students at colleges did not transfer to SFU. In the appendix, approximately 1700 of these 'lost' credits are listed. Credits that were earned in excess of the transfer credit limit of 60 credits, which is the equivalent of two academic years or half a standard bachelor's degree, were excluded from the appendix, but were included in the tallies for each of the tables.

TABLE I
SAMPLE OF TRANSFER STUDENTS BY INSTITUTION ATTENDED AND SFU FACULTY OF ADMISSION

	Applied		Business				% of

Total B.C. College Transfers	27	260	54	13	43	397	100.0%
% of Sample	6.8%	65.5%	13.6%	3.3%	10.8%	100.0%	

This table shows how many students from the sample came from each of the represented colleges. The table shows clearly that most college transfer students came from colleges in the B.C. Lower Mainland, followed by the Interior/Kootenays, Vancouver Island, and Northern B.C. The Lower Mainland colleges account for 87.2% of the sample whereas the non-Lower Mainland colleges account for only 12.8% of the sample. Of the Lower Mainland colleges, most of the students came from Kwantlen University College and Douglas College. This is fully consistent with other data collected and reported by SFU in recent years. Most transfer students were admitted in the Arts faculty (65.5%), followed by Business Administration (13.6%), Science (10.8%), Applied Sciences (6.8%), and Education (3.3%). As mentioned above, these faculty distributions are not entirely reliable in 1998 but are generally consistent with other data collected and reported by SFU in recent years.

Table II shows the average number of credits that students attempted and earned at the college(s) that they attended, as well as the average transfer credits that were granted to those students on admission to SFU. At college, transfer students generally attempted about two years of study or 60 credits and failed or duplicated only a small proportion of these credits, 3.4 credits on average. Overall, SFU granted transfer credit for 85.2% of all the credits students earned at college. This varies somewhat between faculties, ranging from 79.1% in Science to 87.3% in Arts.

FIGURE I
TRANSFER CREDITS GRANTED BY SFU VS. CREDIT EARNED AT BC
COLLEGES

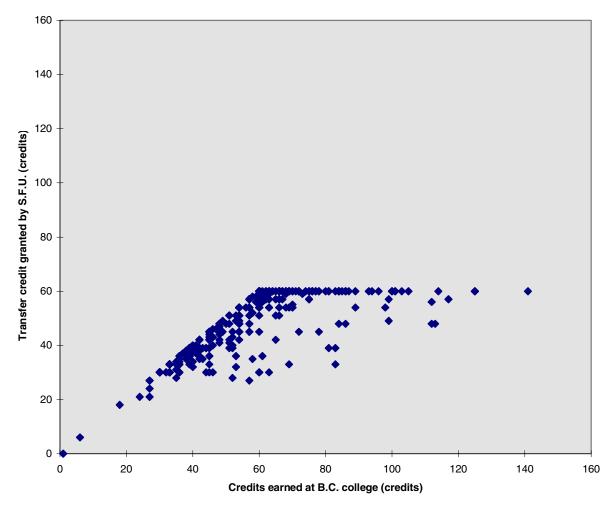

Figure I is a plot of college credits earned and corresponding SFU transfer credits granted for each student in the sample. It clearly shows how SFU transfer credits were limited to 60 in every case and the extent of the college credits earned, amounting to over 140 credits in one case. Efficient transfer is represented by the 45 degree line, where there is fairly strong clustering. Some students appear to have earned fewer than 30 SFU transfer credits, because they have some transfer credits from institutions which are not part of this study. In two cases, it is clear that the students were incorrectly classified as college transfers, because they had earned only 3 - 6 credits at a BC college, and had completed the majority of their post-secondary work at a university. It was decided to leave these students in the sample because their data had negligible effect on the overall study.

TABLE III

TOTAL CREDIT GRANTED AT SFU AS A

Total Number of Credits						
earned at BC College	1400	14590	3003	799	2389	22181

Table III breaks out the data of Table II by college. It shows the percentage of earned college credits that students transferred to SFU, by the college to which they were principally assigned (i.e. where they earned most of their credits). The table shows that the 'efficiency of transfer' was slightly higher (89.2%) for students from outside the Lower Mainland than for those from within (85.3%). Some colleges outside the Lower Mainland show very high percentages of college credits that transferred but these samples are small, so they are not reliable.

TABLE IV

TOTAL CREDITS NOT GRANTED AT SFU AS A
PERCENTAGE OF TOTAL CREDITS EARNED AT A B.C. COLLEGE

This table shows how successful students were at college, listed by the college at which they completed most of their studies. The table indicates the percentage of credits that were attempted and were successfully earned (passed and/or completed). The results show that students passed 94.4% of credits they attempted. However, comparisons between colleges should be made cautiously, because the courses that were attempted unsuccessfully could have been taken at another college and because courses from which the student withdrew are excluded. The last day in a semester or term that a student is permitted to drop a course without academic penalty varies considerably among colleges. Consequently, a student at one college might receive a 'fail' grade for giving up on a course near the end of the term, but if s/he had taken the course at a different college, s/he might have received a withdrawal or course drop instead.

Total Number of Credits						
Granted at SFU	1199	12737	2440	646	1892	18914

This table shows the percentage of the credits that SFU granted to transfer students as unassigned credit. If a college course receives unassigned transfer credit, all students who transfer in with that course receive the same unassigned credit, as published in the BCCAT Transfer Guide, regardless of their faculty or program. Unassigned credit is credit which does not exactly match any specific course at SFU. For example, a college course in Ukrainian history might be given 3 unassigned History credits at SFU,

because we have no similar course, yet the course is recognized as a valid university level history course. At SFU, this is known as a Type 2 transfer credit. Similarly, a college course in Nordic mythology might be granted 3 unassigned General Elective credits at SFU i.e. it is recognized as a valid university level course, but there is no specific SFU discipline closely associated with those credits. At SFU, this is known as a Type 3 transfer credit. The values in this table represent both Type 2 and Type 3 credits, but almost all will be Type 2. Of the total credits granted by SFU, 16.1% were unassigned. Unassigned credit is often regarded as less desirable than assigned credit, but this is not necessarily so. The utility of a particular transfer credit depends on the student's program. For example, an unassigned Chemistry transfer credit is equally as valuable as an assigned transfer credit in all degree programs, except those in the natural sciences, where specific course credit is usually needed to progress to the next level and to meet degree requirements.

The faculty reflects the student's chosen or assigned faculty at SFU, not the discipline of the unassigned credit. The unassigned credit might result from course work taken at the student's assigned college or from another college that they had attended.

TABLE VII

TRANSFER CREDIT NOT GRANTED (BY REASON) AS
A PERCENTAGE OF THE TOTAL CREDIT NOT GRANTED

Table VII summarizes the reasons why 14.7% (Table IV) of earned college credits were not granted any credit by SFU. The assignment of these reasons was difficult because in many cases, there are multiple

reasons and in other cases the reasons are not obvious. The most significant reason is given for each instance and no case has been reported twice.

The most common reason that credit was not granted is that the courses appear to be not taught at the university level or are technical or vocational in nature. Many students took courses in college which were either developmental or remedial (such as English as a second language), were equivalent to secondary school courses (e.g. algebra) or were intended for those directly pursuing careers (e.g. horticulture). Business Administration and Education students were significantly more likely to have taken such 'non-academic' courses.

Large numbers of college credits were unusable because students exceeded transfer credit limits. Rather than add these surplus credits to a student's record, Simon Fraser University instead limits the total transfer credit granted to any student to the most useful sixty credits for the chosen program. This practice of limiting credit is aimed at providing the most accurate information to the student and her or his academic adviser, in the absence of a sophisticated 'degree audit' system. In many cases, these 'lost' credits were, in any event, not transferable for other reasons, such as having not been articulated for credit with the University. Typically, they represent a shift in the student's goals or show that the student was starting an academic career at a basic level, through remedial education. In both of these common situations, it is unlikely that the students expected to receive university credit for these courses. Education students were significantly more likely to have taken such 'extra' courses.

For some students, particularly those in Applied Sciences and Science, credit was lost because college courses carried more credit than the equivalent university course. While some SFU science disciplines give separate laboratory credit from lecture credit (e.g. Chemistry and Physics), the assignment of credit values often does not coincide with the credit values given by colleges. For example, at Kwantlen University College, BIOL 1110/1210 are worth ten credits but when these courses are transferred to SFU as BISC 101/102 they are worth eight credits.

The most troubling category is that of courses that appear to be acceptable for transfer credit, but which, for unknown reasons, have not been articulated for credit. The initiative for seeking transfer credit lies with the colleges, but it is likely that they receive little direct feedback on transfer outcomes from their former students, so might be unaware of problems experienced by their students after they leave. In addition, there appear to be a few errors in the SFU data related to some of the 'source courses' from colleges. For example, we found that for one college ENG.250 was taken in Fall 1998 and received no transfer credit. However, this course does not appear to exist. Probably an error was made when the paper transcript was re-keyed to the SFU system. The correct course was presumably ENGL250 – an articulated and transferable course. Since SFU uses a computer-based transfer credit evaluation tool, such an error is not easy to detect, yet can cost a student substantial credit. Adoption by colleges of Electronic Data Transfer (EDT or EDI) greatly reduces this error factor. In 1998, both Douglas College and Kwantlen University College sent records to SFU via EDT, no doubt to the benefit of their students.

Other reasons for a course to not transfer are relatively uncommon. In a few cases, transfer credit is granted only for a combination of courses, but not for each course individually. This occurs for some accounting courses, hence is more likely to affect Business Administration students. For example, Accounting 110/210 at Douglas College is worth six credits, but transfers to SFU as BUS 251 which is worth only three credits. Some disciplines, principally languages, limit credit at certain levels. Finally, students sometimes duplicate credit at the same or at different institutions, sometimes intentionally and sometimes unknowingly.

TABLE VIII

AVERAGE NUMBER OF CREDITS NOT GRANTED PER STUDENT LISTED BY REASON

Reason why transfer credit was not	Applied		Business			SFU
granted at SFU	<b>Sciences</b>	<u>Arts</u>	Admin.	<b>Education</b>	<b>Science</b>	<u>Total</u>
	(cr.)	(cr.)	(cr.)	(cr.)	(cr.)	(cr.)
Course is assumed to be not university level or is technical/vocational	1.7	2.4	4.4	4.7	3.7	2.9
Maximum transfer credit exceeded in program	1.7	1.5	1.9	4.2	1.5	1.8
Course credit at SFU weighted less than source course	2.7	1.0	1.7	0.9	3.7	1.5
Course appears to be university level, but is not articulated	1.1	1.4	1.5	0.5	2.4	1.5
Course credit is only available when taken in conjunction with other course(s), i.e. 'cluster credit'	0.3	0.4	0.7	0.5	0.3	0.4
Maximum transfer credit exceeded in subject/year level	-	0.2	-	1.0	-	0.1
Course duplicates a course already transferred	-	0.2	0.2	-	-	0.1
TOTAL	7.5	7.1	10.4	11.8	11.6	8.3

This table summarizes the reasons why, on average, 8.3 earned college credits per student did not transfer to SFU. Clearly, the most important reason is that the college course credit earned was not judged to be appropriate for credit towards a Bachelor's degree at SFU. The reader might find Appendix 1 helpful in forming his or her own judgment on this matter. In the opinion of the authors, the vast majority of students who choose to take courses that will not transfer to the University to which they intend to transfer do so in full knowledge of this, and are in no way surprised at the transfer credit evaluation they receive.

#### Comparisons with the 1998 UBC study

The 1998 UBC study of transcripts of transfer students was mentioned earlier and is cited in the bibliography. In general, the outcomes were similar. The 1998 study showed that UBC transfer students attempted and passed fewer transfer courses, on average, suggesting that they were transferring earlier to UBC than to SFU. On average, they received 4.4 fewer transfer credits at UBC than at SFU, but this represented a generally similar 'efficiency of transfer' to both universities, with UBC being on average 0.3% lower. On average, UBC transfer students 'lost' 7.5 transfer credits each, when they transferred, whereas SFU students 'lost' 8.3 credits. UBC grants a significantly greater proportion of unassigned credits than SFU (29.1% vs. 16.1%). This might be due in part to the year-long nature of some UBC courses, compared with the semester-long courses that are typical at colleges and at SFU.

The UBC study included a Table IX, which identified by college where credit was weighted less at UBC than at the college. A similar table was not reproduced in this study, but the overall comparison reveals that SFU Science and Applied Sciences students lose more credit in this way than do those in other faculties, i.e. 2.7 and 3.7 credits respectively, compared with UBC transfer students who lost on average 3.2 and 4.6 credits in Applied Science and Science. These slightly lower figures for SFU are to be expected because it is widely known that in some Science disciplines, notably Physics and Chemistry, SFU grants separate lecture and lab credits and attempts to match the credits granted by colleges. Another factor affecting transfer credit in Science and Applied Sciences is SFU's restriction on credit for higher level computer programming languages. Students who have already learned one language receive reduced credit for learning additional languages, because there is much conceptual and theoretical overlap of content (e.g. BASIC versus PASCAL). Some colleges grant full credit for each language learned, whether or not the student has already achieved mastery in another programming language.

#### **Further Comments**

Colleges have broad educational mandates: they were not established to offer exclusively academic programs for later transfer to a university and to suggest that would be to greatly diminish their place in the post-secondary system. College students attend for a wide variety of reasons, and as one can see in Appendix 1, sometimes over an extended period, in a variety of programs. The college transcripts of the sampled students provide the raw data for this study, but behind each transcript lies a personal history that can only be guessed at. 'Lost' credit is a misnomer if the completion of a (non-transferable) certificate in the 1980's led to steady employment and a successful career until, by the mid 90's, the individual decides to return to college, work towards a new career goal by earning university entrance and complete a degree. Similarly, a mature student who decides on a university degree but whose English skills are weak would hardly consider Adult Basic Education courses as wasted time or 'lost' credit. Without these essential foundations, the subsequent learning would be in jeopardy. Hence, in future studies of 'transfer efficiency,' it might be argued that 'source' courses should be chosen more selectively. If that had been done in this study, the overall efficiency of transfer would be significantly higher, at over 90%. Transfer efficiency would also be much higher (about 88%) if the credits taken in excess of SFU's transfer credit limits were excluded.

These results should be encouraging both to students and to those working cooperatively at universities and colleges to make transfer easy, efficient and seamless. From the viewpoint of an average transfer student who was successful in making the transition from a college to a university, it seems clear that the transfer process works efficiently for the great majority of students.

## Appendix I

#### **B.C. College Courses not Granted Credit at SFU**

The following college course credits were earned by students who transferred to SFU, but no transfer credit or reduced transfer credit was granted. Courses taken by students in excess of 60 credits are excluded.

The first column shows the subject code and the course number.

The second column shows the semester and the year the course was taken.

If more than one student did not receive transfer credit for a course in a semester, the number of students is shown.

The third column shows the credit value of the course given by the college.

The fourth column shows the course title.

Some of the course credit values are not known. A credit value of n/a indicates that the college assigned no credit value. Blanks indicate that no information could be found about the course.
